Small Addressable Fire Alarm Control Panel

E3 Series™

The S3 Series™ fire alarm system is an easy-to-use, intelligent fire panel designed for small to mid-sized buildings. Analog technology delivers the benefits of simple system installation, while the user-friendly touchscreen allows for quick, smart, and intuitive panel operation and system maintenance.

The S3 Series operates as a standalone system or as a network-configured system, offering flexibility and expandability. It supports up to 122 panels through its networking ability to grow with your business. In addition, the S3 Series communicates with our E3 Series® Emergency Evacuation System on a single pair of wires, so when and if your facility requires additional mass notification protection, the S3 Series is a cost-effective solution.
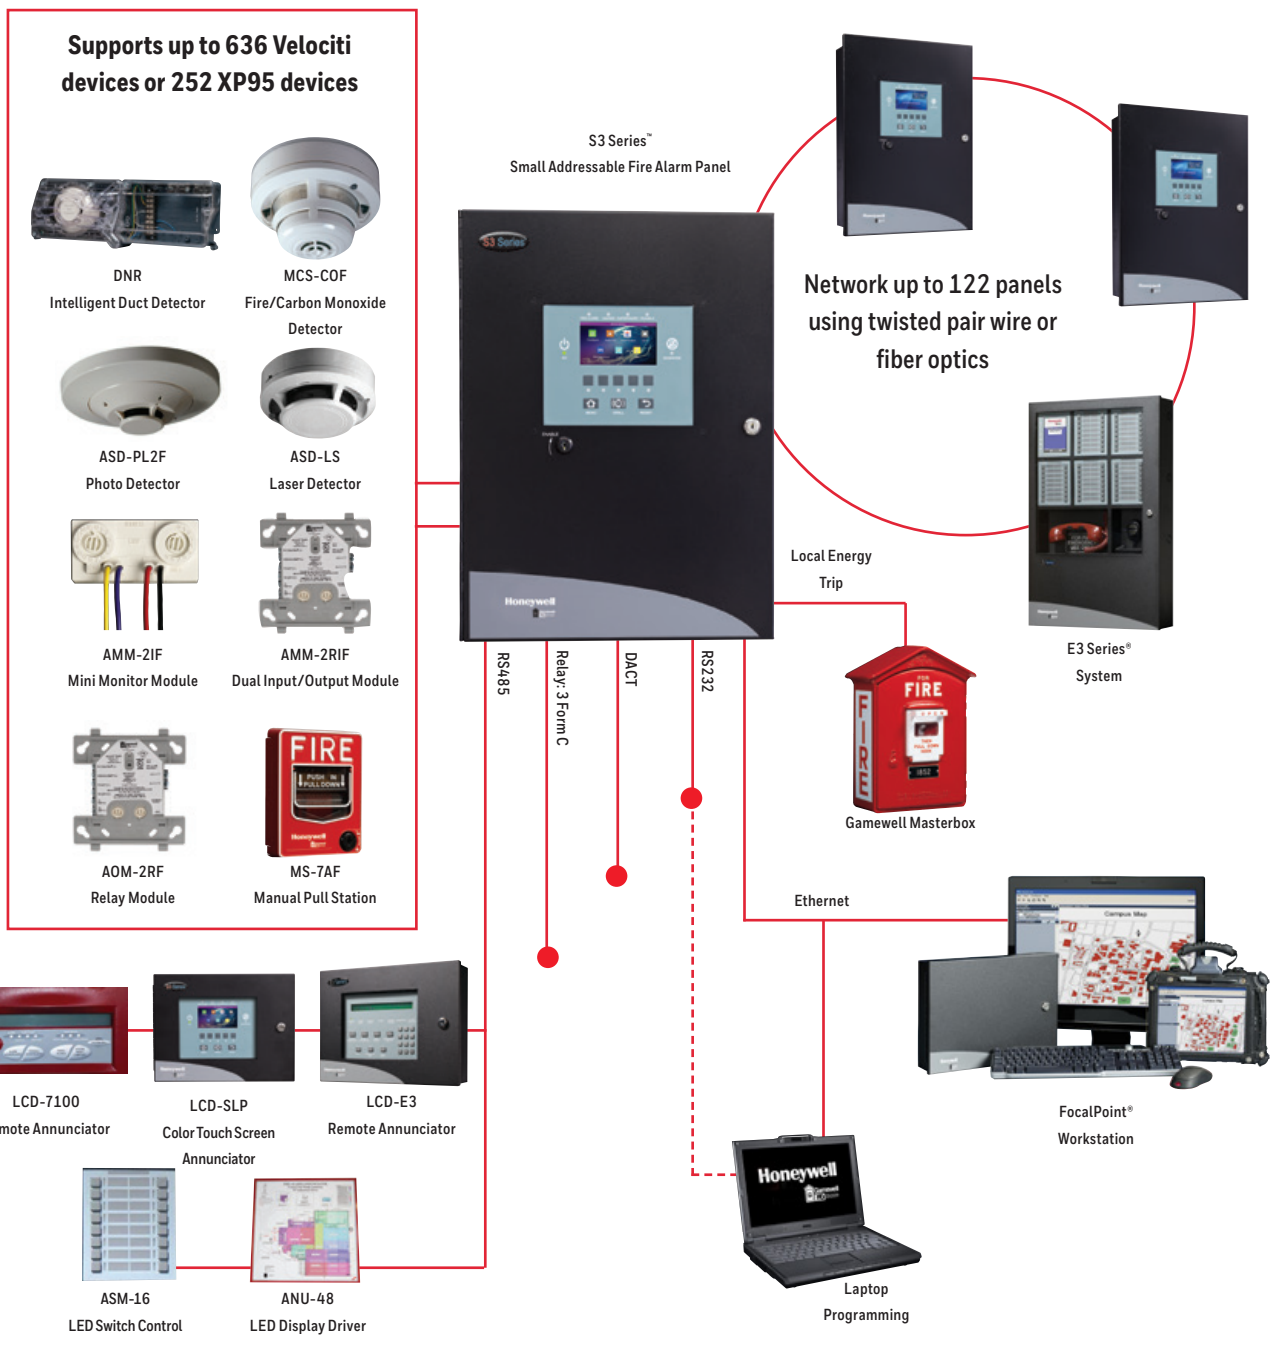

Take the Fear out of the Fire Alarm

The front panel of the S3 Series offers a 4.3-inch color touchscreen display for simple and convenient operation by facility managers and first responders. Much like consumer electronics, customers prefer the touchscreen over confusing buttons and switches. The screen shows system status, event details, and service modes. On the front of the panel, 6 LEDs show fire, hazard (gas or carbon monoxide), supervisory, silenced, AC power, and trouble conditions. Quickly access common functions like device disable, output bypass, and device status with 5 custom, programmable switches.

ADVANTAGES

- 4.3-inch color touchscreen display
- 5 programmable function buttons for quick and simple access to common service actions
- Supports System Sensor or Apollo sensors/modules
- Available in a single loop – easily expands to 2 loops without replacing the complete system (252 maximum devices with Apollo, 636 maximum devices with System Sensor)
- Advanced networking capabilities for system expansion – up to 122 nodes over twisted pair wire or fiber optics
- Communicates to E3 Series® system for mass notification and voice evacuation capabilities

- Supports System Sensor Velociti® – single or multi-criteria intelligent detectors
- Complete range of programming from automatic configuration to CAM logic, user-selectable flexibility
- Hazard LED indicator for gas and carbon monoxide event
- Built-in Ethernet port for programming and FocalPoint® connectivity
- Retrofits into our legacy Gamewell 602/610 and FCI 7100 Series panels
- Automatically adjusts to any EOL value for legacy audible / visual appliances
- Removeable display for optional remote annunciation
